## **1 GENERAL**

---

### **1.1 DESCRIPTION**

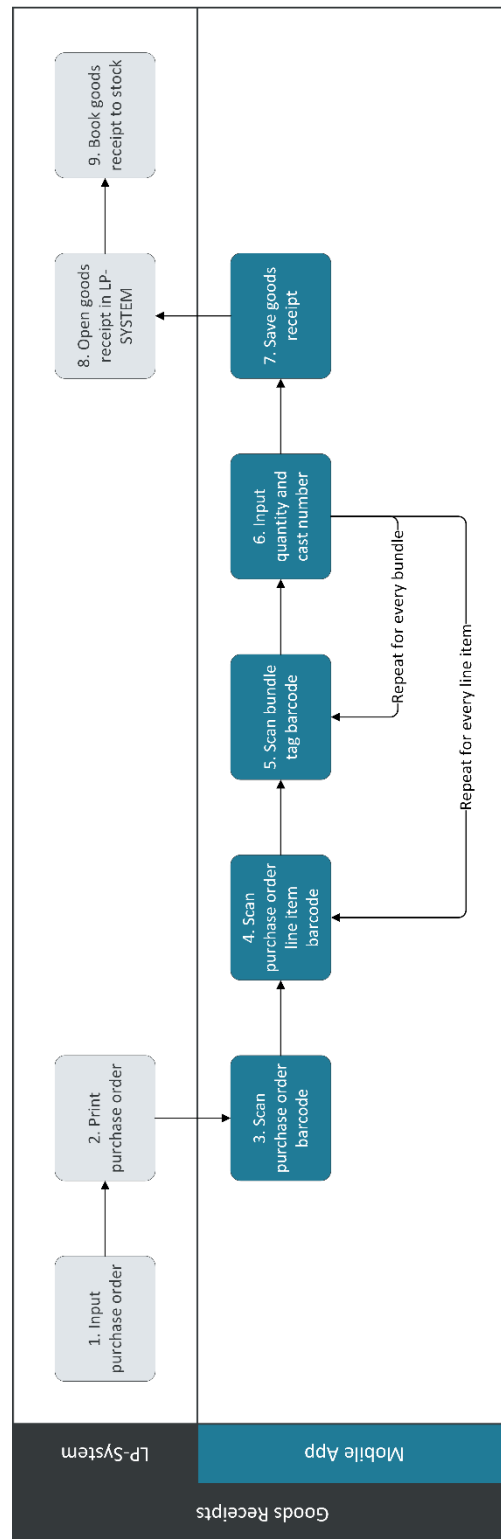

The mobile app "GoodsReceipt" was designed to run on a mobile scanner. It allows to record the received goods by bundle. The big advantage over the common method of inputting goods receipts in the office is the possibility to directly scan the supplier's cast number bundle tag barcode and enter the cast number and weight per bundle.

---

### **1.2 REQUIREMENTS**

The mobile app requires a device with either Windows 10 operating system in version 1803 minimum or Android operating system in version 8.0 minimum.

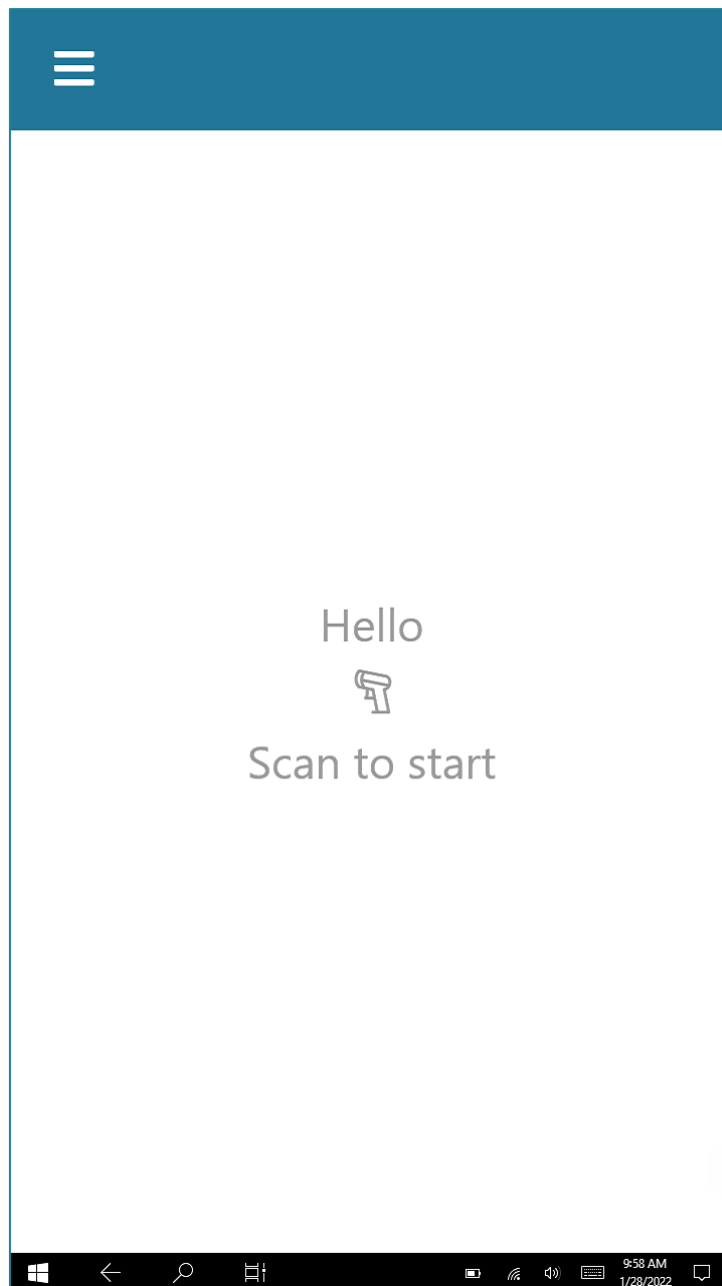

## 2 PROCESS FLOW

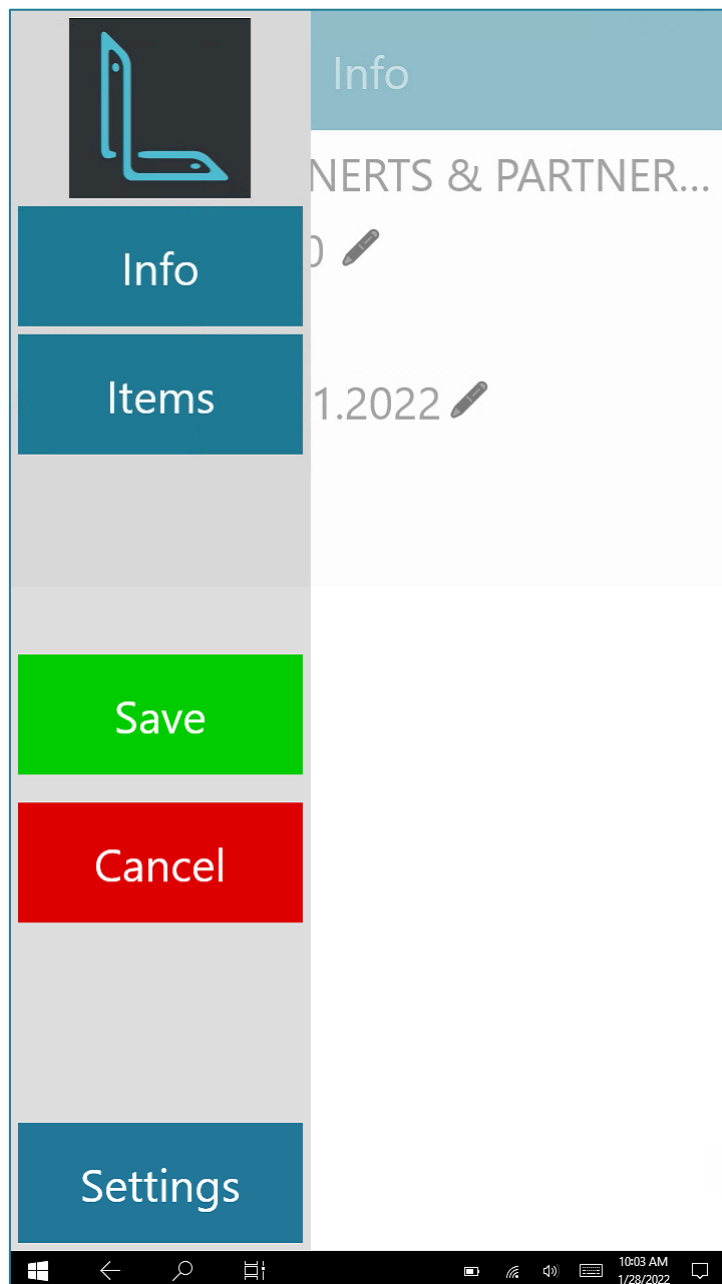

### 3 GOODS RECEIPTS

#### 3.1 MENÜ

The following screen is shown after starting the application.

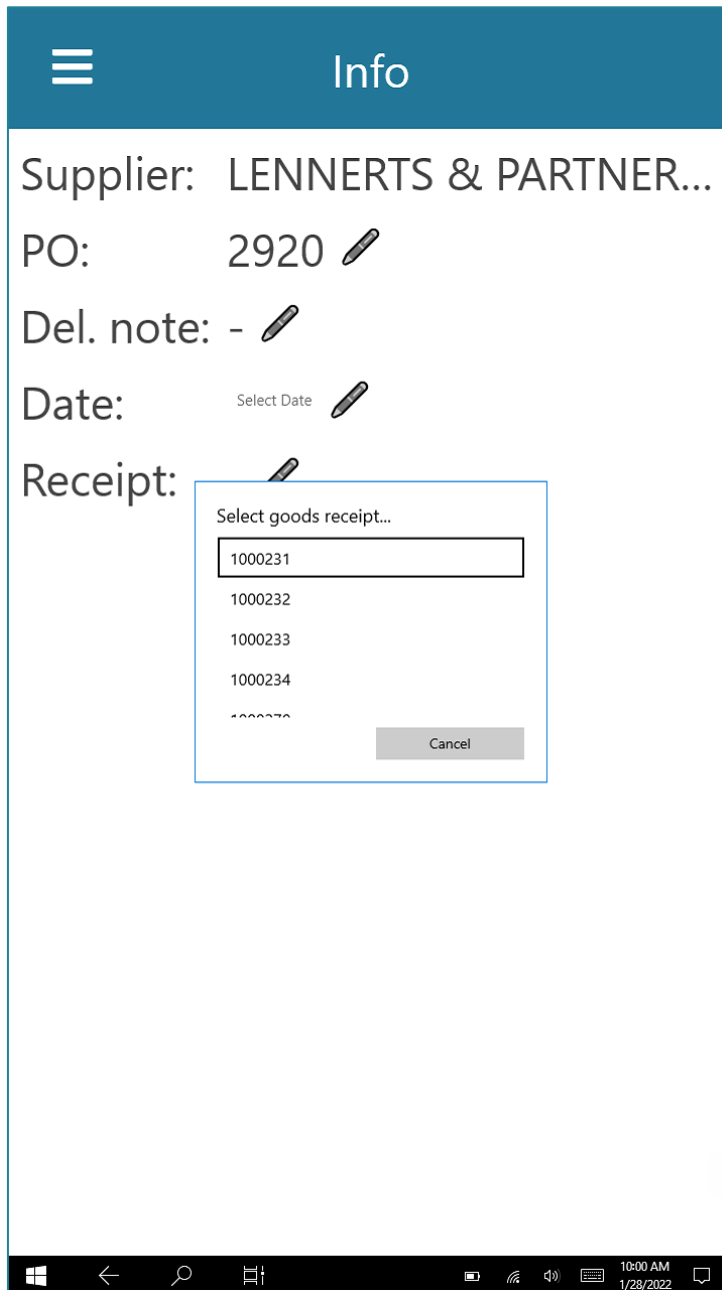

The button on the upper left corner opens the menu.

The recording of a goods receipt starts by scanning the purchase order barcode.

Tel.: +49 9561 80400  
Fax: +49 9561 804040  
Mail: [info@lennerts-partner.de](mailto:info@lennerts-partner.de)

After scanning the purchase order barcode any existing goods receipts linked to that purchase order will be shown. Select an existing one to add items to it or select the button “+” to create a new goods receipt.

**Info**

After choosing an existing or creating a new goods receipt the following screen appears.

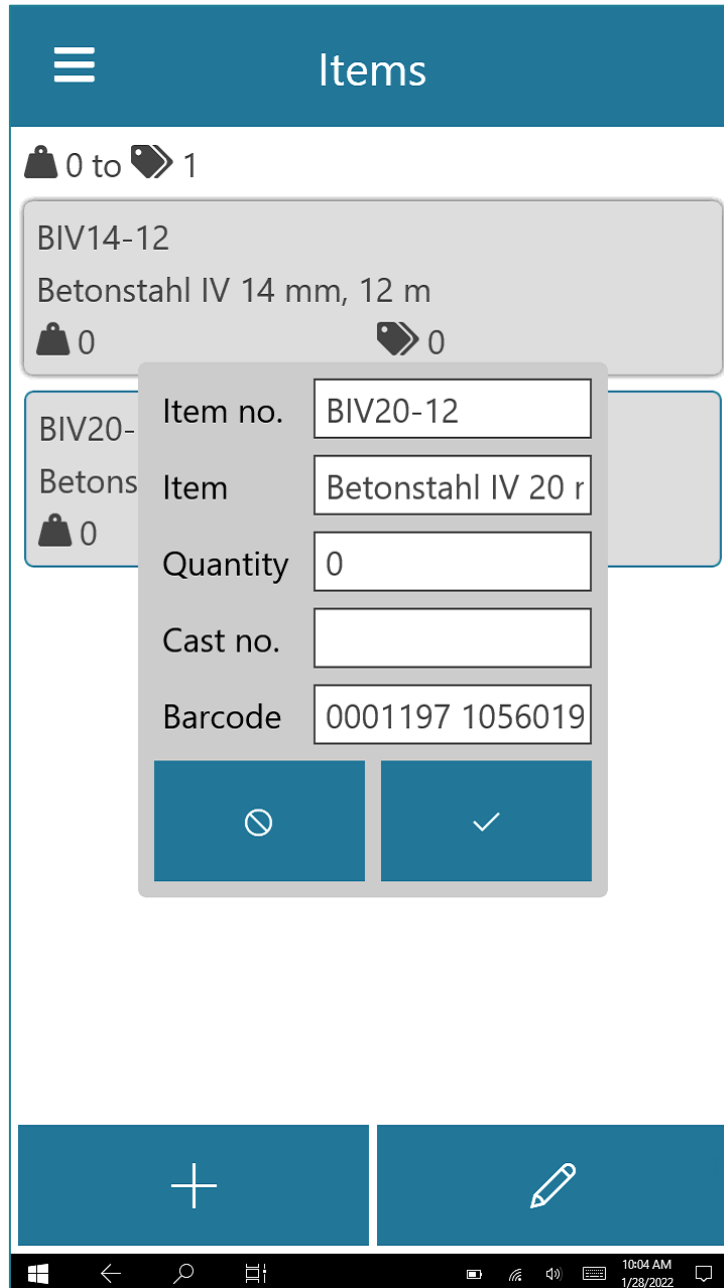

### 3.3 RECORDING BUNDLES

The next step is to scan or click the purchase order line item barcode. The selected line will be highlighted with a colored frame.

Now the bundle tag barcode is scanned. This automatically opens a small dialogue in which the weight and charge/heat number can be added if necessary.

The screenshot shows a mobile application interface titled "Items". At the top, there is a menu icon and a status bar indicating "0 to 1". Below this, a list of items is displayed. The first item is "BIV14-12" with the description "Betonstahl IV 14 mm, 12 m" and a weight of "0". The second item is "BIV20-12" with the description "Betonstahl IV 20 r" and a weight of "0". A modal form is open over the second item, allowing for editing. The form contains the following fields:

Item no.	BIV20-12
Item	Betonstahl IV 20 r
Quantity	0
Cast no.	
Barcode	0001197 1056019

At the bottom of the modal form are two buttons: a "cancel" button (represented by a circle with a diagonal line) and a "confirm" button (represented by a checkmark). The bottom of the screen features a navigation bar with a "+" button and a pencil icon. The Windows taskbar is visible at the very bottom, showing the time as 10:04 AM on 1/28/2022.

Then the next bundle tag barcode can be scanned.

When all bundles have been recorded the goods receipt is saved by clicking the button "Save".

## 4 CORRECTING & BOOKING GOODS RECEIPTS

Once a goods receipt has been saved it can be accessed from LP-SYSTEM. After a click on the button "Cast numbers" the following screen appears in which the quantities and cast numbers can be corrected.

[illegible]

**LENNERTS**  
& PARTNER GmbH

Have all bundles been recorded resp. corrected the goods receipt can be booked to stock by clicking the button "Stock booking".

[illegible]

## 5 CONFIGURATION OF THE MOBILE APP

When clicking the button "Settings" in the menu the following screen appears. In the settings you can choose the application. For weight differences a tolerance can be specified. Furthermore, you can decide, if bundles can be recorded without weight. The weight will then be calculated by the total weight of the goods receipt line item and the number of bundles.
